DCR now incorporates the power of artificial intelligence (A.I.) to capture the record with CourtSide®.

How does it work?

CourtSide applies multi-engine speech recognition and voice-to-text intelligence to transcribe audio files recorded with DCR during legal proceedings. This automated process returns speaker-identified, court-formatted transcripts within minutes. You can take it from there or let our editors handle the rest. You'll receive the final edited transcript in the timeframe you need.

How can you benefit from CourtSide A.I.?

-  **Faster Turnaround Time**
-  **Significant Cost Savings**
-  **Accurate Official Record**
-  **Cloud Storage and Search**

Trusted and Experienced

BIS Digital has been serving courts for nearly 40 years. Our 8000 customers understand the value of a reliable, easy-to-use digital recording solution. We can design a system that perfectly fits your court's needs with digital recording, audio and sound reinforcement, evidence presentation and video conferencing.
